

Substrings of a string

29 June 2023 21:38

substring \rightarrow Any continuous / contiguous part of a string is called substring.

str1 = ("abcd")

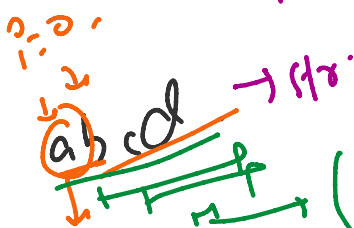

if I can find all the substring starting from 'a'

a, ab, abc, abcd

add all substr. starting from 'b' b, bc, bcd.
c, cd
d,

str1 = "abcd"

o/p = {a, b, c, d, ab, bc, cd, abc, bcd, abcd}

```
for (int k=0; k < len(str1); k++)
    for (int i=k; i < len(str1); i++)
```

```
    {
        for (int j=0; j <= i; j++) a;
        cout << str1[j]
    }
```

but endl

```
a
ab
abc
abcd
```
